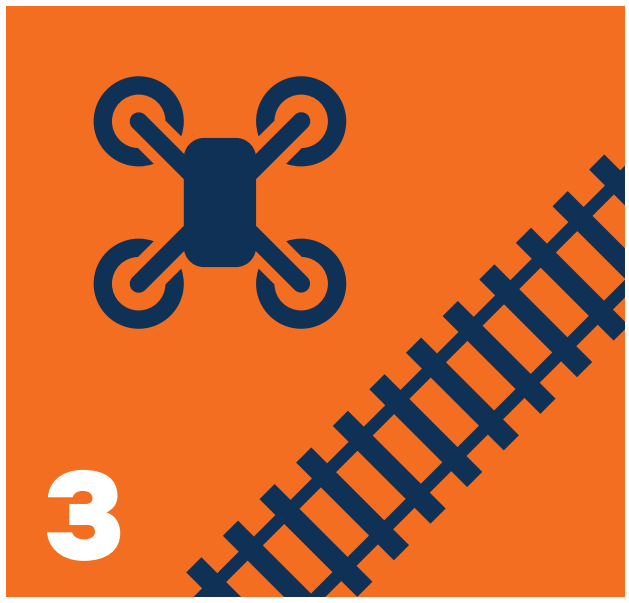
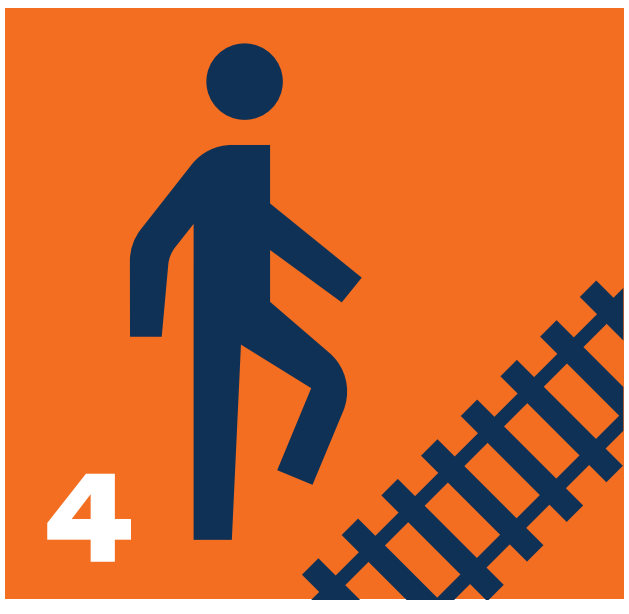
Rules for the Operation of Drones around Railway Infrastructure

All aerial activity within the protective zone of the track during train movement is prohibited.

All aerial activity within the protective zone of the track during train movement is prohibited, except in cases of direct coordination with the dispatcher and with a specific authorization granted by Správa Železnic (due to the danger of collision with a train).



If you intend to operate within Inner Zone A directly above the track area (not merely overflying with C0, C1 or C2 class drones), you must always obtain prior authorization from Správa Železnic confirming flight coordination.



Do not enter the protective zone of the track unless you are a holder of a valid track access permit. No one is aware of your presence. You may be struck by a train.

In the event of recovering drone wreckage from the protective zone of the track, use the emergency number +420 607 208 070 (you may be struck by a train if no one is aware of your presence).

In case of an emergency during drone flight, please contact the line 112 or +420 607 208 070 HZS SŽ.

It is forbidden to collect drone wreckage from the protective zone of the track, wait for the arrival of the Fire Department with Police and for operations to be stopped. Each such emergency event has to be investigated.

Follow the Správa železnic website and the current status of rules for the use of drones in the geographical zone of Správa železnic's railway infrastructure. As a pilot, it is your responsibility to familiarise yourself with them.

Any drone detected staying without coordination with the flight path in the geographical zone of Správa železnic will be reported to the Police of the Czech Republic as an offense in the control and operation of an unmanned aerial system.
